Dear Uster Snow

I am opposed to the revised called plan.

Instead of raising existing dams and building new dams, I would like to see effort made to better utilize our existing water supply.

I urge called to expand water efficiency, conservation and reclamation programs; to plant crops less water consumptive and installing water meter for farmers and urban users.

We cannot solve ecological problems caused by dams

by building more dams.

Please write me and let  
me know your views.

response

Sincerely,  
Margit Petrofsky
